Joel Agnel Fernandes

16+ years of systems software development experience.

EXPERIENCE

Principal Engineer – NVIDIA, Virginia

2025 – Present

GPU performance: Optimized GPU interrupt handling and engine context-switch scheduling for cloud-gaming workloads (CUDA/Vulkan), cutting GR engine context switches and IRQ rate to deliver 7–15% FPS gains and ~40% lower context-switch overhead.

CPU scheduling & Linux kernel: Co-maintainer of the RCU subsystem, with improvements merged upstream. Contributor to the sched_ext (BPF) scheduling framework — added CPU starvation protection and idle-CPU selection improvements.

Linux kernel — Rust GPU driver: Lead author of memory-management and interrupt-handling support for NVIDIA's open-source Rust GPU driver for Hopper/Blackwell.

CUDA: Performed CUDA architecture investigations by tracing CUDA initialization, OS/firmware interactions to define the bring-up path on new GPU drivers. Optimized LLM inference (vLLM on Grace Blackwell): raised throughput ~14% and cut latency ~13% under heavy load, with a 7× reduction in p99 tail-latency jitter, via CPU isolation, NUMA-aware pinning of tensor-parallel workers, and real-time scheduling with a sched_ext (BPF) scheduler.

Local AI: Open source contributor (llama.cpp, OpenClaw); efficient, functional on NVIDIA HW.

Staff Software Engineer – Google, Virginia

2016 – 2025

Worked on Linux kernel RCU and scheduler fixes and improvements for Android and ChromeOS Linux. Helped out with Linux kernel stability testing for upstream RCU. Upstreamed mremap(2) changes to the Linux kernel causing several-fold performance improvements to the new Android garbage collector. Developed and upstream Core scheduling features in the Linux kernel for hyper-thread isolation. Worked on C++ code development for the open source Chrome browser project, made performance improvements to Chrome browser display and audio threads. Worked on CPU scheduling power-saving features for the Linux kernel.

Senior Systems Engineer – Amazon, Sunnyvale

2014 – 2016

Worked on device bring up of various products including Amazon Echo, Show, Dot, Kindle etc. Fixed issues in MMC and PMIC driver stack by working closely with Hardware engineers. Worked on a mechanism to write kernel function execution traces to PSTORE (persistent store) of the Linux kernel and upstreamed them. Fixed bugs in the Linux kernel's tracing infrastructure and upstreamed them.

Systems Engineer – Texas Instruments, Dallas

2012 – 2014

Team member in the base port bring-up team in the Linux Core Product Development (LCPD) group. Performed bring up of various ARM hardware Boards including Beagleboards. Tweaked Ethernet and USB stacks to make network boot possible. Maintained the EDMA DMA Engine driver. Authored several improvements to DMA (performance and framework). Author of various cryptographic drivers for OMAP SoCs. Worked on every level of the kernel stack including machine layer, early boot code (ARM), boot loader, block layer, file systems, networking and display drivers. Optimized performance and fixed bugs with heavy use of tracing, profile and debug tools. Responsible for core Linux kernel support for TI's Davinci, OMAP and Sitara line of ARM based SoCs.

Full Stack Developer – Atlantis Computing, Bangalore

2008 – 2010

Developed a JavaScript, Ruby-On-Rails and Erlang application for a browser-based product that allows users to interact with a virtual machine.

Networking Researcher – University of Texas, Dallas

2010 – 2012

Conducted research and experiments on different metrics to estimate the link conditions and thus improve routing. Modified drivers and mac80211 Linux Kernel code and carried out experiments. Worked on TCP/IP, UDP and other areas. Fixed bugs in wireless driver and routing code. Worked with professor Ravi Prakash on research assistance.

Full list of conference talks and publications at joelfernandes.org

SKILLS

Programming: C, C++, Python, JavaScript, Ruby, Rust, Assembly, TLA+, Lisp, Perl, Erlang, LaTeX, Verilog.

Processors: ARM Cortex-A, Cortex-M, ARM9, MSP430, x86, x86-64, 8051.

OS's: Linux, Android, Windows.

Debug Tools: GDB, KGDB, KDB, Ftrace, SystemTap, ktap, Lauterbach, OpenOCD, Eclipse, Wireshark. Other Tools: Git, SVN, Vim, Emacs, cscope, Gnuplot, Matlab, ModelSim, Pandas, matplotlib.

COMMUNITY

Contributed patches to various open source projects including Linux kernel operating system.

Presented talks at various conferences including Linux Plumbers conference, Kernel Recipes, OSPM, Embedded Linux Conference in America and Europe.

Taught several classes on Linux Internals and Embedded Systems.

EDUCATION

University of Texas at Dallas, Richardson TX

Masters, Computer Engineering — Aug 2010 – May 2012

- GPA 3.97/4.0. "A" in 10/11 courses.
- Full tuition waiver scholarship, Spring 2011.

Visvesvaraya Technological University

B.E. Electronics & Communication — 2003 – 2007

- First class with distinction, second rank in college.
- Merit Scholarship 2004–2006.
